

Superfund GCT EUR¹ ended the month of November with a performance of -1.80 %

World stock indices moved higher again in November led by new all time highs in the Dow Jones Index and solid gains in the tech-heavy Nasdaq. Positive early month US unemployment figures, combined with steady late month GDP figures in the US and Japan, eased fears of a sharp economic slowdown. Energy markets extended losses early in the month only to find late month strength on steep inventory declines, additional OPEC production cut threats, and ongoing chaos in Iraq. The arrival of the first major winter storm in the US supported values as well. US Bond markets continued higher while money markets were flat as the conflicting inputs of strong employment and GDP readings were offset by slowing CPI, PPI, and housing figures. Interest rate hikes in Australia, the UK, and Norway allowed for significant gains against the greenback. The Euro surged against the Dollar and Yen as the ECB remained hawkish in the face of money supply expansion and inflation risks. Gold and Silver advanced on Dollar diversification and stronger energy markets. Nickel and Zinc extended gains, buoyed by production delays and solid demand. Corn added to October gains on lower USDA production estimates while meats lost ground as higher feed costs resulted in great short-term selling pressure.
